SWATI PANDIT

SENIOR SOFTWARE ENGINEER

CONTACT

+91 9836052114

swatipandit.sp30@gmail.com

Kolkata, West Bengal

TECHNICAL SKILLS

- **Languages**: Node.js, Java, Python, JavaScript, C#, SQL
- **Cloud**: AWS (Lambda, EKS, EventBridge, SQS), Azure (DevOps, API Management)
- **DevOps & Infrastructure**: Terraform, GitHub Actions, Docker, Kubernetes
- **Integrations and APIs**: Salesforce, REST APIs, OAuth, Bullhorn
- **Data**: SQL Server, Oracle, MongoDB, Redis
- **Monitoring and testing**: Datadog, KQL, Jest, end-to-end testing
- **AI-assisted development**: Claude, GitHub Copilot, Gemini, ChatGPT
- **Practices**: Agile and Scrum, CI/CD, production support

EDUCATION

2016 - 2020

MEGHNAD SAHA INSTITUTE OF TECHNOLOGY

- Bachelor of Technology in IT (B.Tech)
- GPA: 8.06 / 10.00

PROFILE

Senior Software Engineer with **6** years of experience architecting and modernizing enterprise integrations, cloud platforms and web applications. Led development of a recruiting data platform, setting delivery standards, mentoring engineers and driving cross-functional alignment. Skilled in API-led integration, process automation and large-scale data migration, with a proven record of keeping production systems secure and resilient. Ownership-driven leader who takes business-critical work from discovery and design through release and support.

WORK EXPERIENCE

Tavant Technologies JAN 2024 - PRESENT

Senior Software Engineer

- Led the development team through a critical 8+ month platform migration, owning scoping, planning and production release, driving cross-functional alignment across business & engineering, and delivering 94% of planned work in staged rollouts across multiple business units.
- Architected parallel-run code and a three-stage release framework that scaled rollout from 10% to 100% of records, using end-to-end testing across test and live environments to catch defects and data issues pre-release, with no lost workday or data.
- Transformed a single-developer risk into a self-sufficient team: assumed sole ownership of a business-critical platform when its only senior expert left, mastered its codebase and integrations, and mentored engineers into developers now supporting it and the migration.
- Single-handedly designed and delivered a contract-approval automation that auto-approves about 43% of monthly contracts, saves about 220 hours a year and runs 24/7 with near-instant approvals, freeing approvers to focus on exceptions.
- Resolved critical partner-team escalation through multi-team collaboration, re-architecting a high-volume data sync into batches for 16.7x throughput, a 94% shorter sync time and 99.98% fewer partner-system calls, and remediating data accuracy across tens of thousands of candidate records.
- Resolved a production outage at its root cause and cut authentication requests on a high-volume sync by at least 50%; Modernized services to current framework and language versions, eliminated critical security vulnerabilities, and introduced proactive monitoring alerts.
- Delivered 97.6% of assigned work and closed 100% of production incidents while growing monthly output 80% - reducing average task completion time 57%.
- Largest individual contributor to the core platform (about 25%) and top contributor to a service (about 45%), plus sole developer of automation.
- Embedded Artificial Intelligence - augmented engineering across the delivery lifecycle, orchestrating Claude, GitHub Copilot, Gemini and ChatGPT through disciplined prompt engineering to accelerate coding, testing, llm, documentation and refactoring, contributing to a 65% output jump while holding quality.

Technologies and tools: Node.js, JavaScript, Java(Spring, Maven, Tomcat); AWS (Lambda, EventBridge, SQS, S3, AppSync, CloudWatch, SSM, EC2, EKS, OpenSearch, DynamoDB, RDS), Serverless Framework, Terraform, GitHub Actions, Kubernetes; Salesforce (REST, OAuth, Event Relay), Bullhorn (REST, Data Loader), IntelAgree API; Datadog, Microsoft Teams alerting, Wiz security scanning; shell, Jest, Yarn, GraphQL, SQL Server, Git & GitHub, Jira.

PROJECTS

AI & Web Development

- Sync-health assistant
- Runbook & documentation assistant
- AI-assisted Onboarding
- AI chatbot webpage (OpenAI)
- Responsive company website

Scripting & Automation

- Contract-Approval Automation
- Data-Accuracy Clean-Up
- Recruiter Email Automation
- SMS automating script
- To-do list tracker

NFT on blockchain

FUNCTIONAL SKILLS

- Technical leadership & ownership
- Scoping, planning & release management
- Cross-team collaboration & stakeholder communication
- Process automation
- Mentoring & knowledge transfer
- Root-cause analysis and decision-making
- Quality assurance & code review
- Risk management & Production support
- Prioritization & Adaptability

HOBBIES

- Travel and Networking
- Exploring emerging technologies and AI tools
- Mentoring and Teaching
- Trying new food

LANGUAGES

- English (Fluent)
- Hindi (Fluent)
- Bengali (Fluent)
- German (Basics)

Tata Consultancy Services SEP 2020 - NOV 2023

System Engineer

- Engineered Azure DevOps CI/CD pipelines with Git and Jenkins, cutting deployment times by 53% and making releases faster and more repeatable.
- Built KQL monitoring dashboards for API traffic and storage use, identified and removed unused cloud resources, and cut storage cost by 7%.
- Managed and optimized 12 Azure services, including API Management, Function Apps, Logic Apps, Data Factory, Event Hubs, Service Bus, Cosmos DB and Redis Cache.
- Containerized applications with Docker and Kubernetes and codified infrastructure in Terraform, improving scalability and consistency across environments.
- Designed and developed full-stack web applications end to end: React, Angular and Bootstrap front ends with Python, Java, C#, .NET and Spring Boot back ends, backed by optimized SQL Server, Oracle, MongoDB and Redis data layers.
- Strengthened team delivery through code reviews, unit testing and technical documentation, driving cross-team collaboration in Agile and Scrum to manage sprints, backlogs and Kanban boards within SLA.
- Onboarded and mentored several engineers through structured knowledge transfer and hands-on coaching, equipping them to support project delivery and strengthening the team's capacity.

Technologies and tools: Azure DevOps, Git and GitHub, Terraform, Docker, Kubernetes; Azure (Redis Cache, Cosmos DB, Stream Analytics, Application Insights, API Management, Function Apps, Logic Apps, Data Factory, Event Hubs, Service Bus, Storage, VMs); Frontend, Backend, Full stack, back end, front end, typescript, debugging, Python, Java, C#, .NET (MVC and Core), Spring Boot, JavaScript, React, Angular, HTML, CSS, Bootstrap, microservices; SQL Server, Oracle, PL/SQL, MongoDB, Redis, PostgreSQL; Database, Authorization, Authentication, artificial intelligence, application security KQL, PowerShell, Linux and Unix shell; Jira, Confluence, SharePoint.

CERTIFICATIONS

- AWS Solutions Architect
- Microsoft Certified: Azure Developer Associate (AZ-204)
- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Certified: Azure Data Fundamentals (DP-900)
- IBM: Introduction to Cloud and IBM Cloud Essentials

ACHIEVEMENTS

- Tavant Appreciation for 97.6% of assigned work delivered, with monthly output up 80% and mean time to resolve down 57%.
- Largest individual contributor (about 25% of all changes), top contributor on a second service (about 45%)
- TCS Elevate Wings Award: earned TCS Digital status and a promotion to a higher position.
- TCS Xcelerate Warrior: recognized for outstanding performance.
